# Kwikfold Tower

The Kwikfold Tower is a professional and versatile tower system that can be used for a wide variety of applications.

It is a lightweight access system that is easy to transport and store. Perfect for use inside and out. Designed with ease of assembly in mind. The Kwikfold Tower can be easily erected by one person in a quick two stage assembly process.

The split system design allows you to set the unit up as two individual working platforms of 1790mm or a combined working platform height of 3.5mtrs.

Lightweight yet robust for industrial use with a max safe working load of 150kg per platform. The platforms have a hatch lid providing safe internal access.

The Kwikfold Tower comprises one folding frame unit, two hatch platforms, two H frames, two guardrail frames, four horizontal braces, two diagonal braces, one plan brace, four outriggers, two sets of lockable castors.

(Adjustable castors for uneven ground are available)

Tested to the requirements of AS/NZS 1576.
